(54) Title: MEASURING DEVICE, SUCH AS A SCALE OR MEDICAL SCALE

(57) Abstract: A medical scale for determining the weight of a person where the person is one of self-supported, partially self-supported, and supported by a support device, such as a wheelchair. In some embodiments, the scale is provided with wheels to be portable. Also, some scales can be folded, pivoted, or adjusted into a more compact structure to be moved or stored. Some embodiments include an interface that can be swivelable and/or pivotable to allow the display to be viewed from a variety of directions. Some embodiments can also communicate with a network. The scale can also have individual adjustable load cells. The scale can also be configured to accept a swipe card, smart card, or light pen to match patient identification with a measured weight.
